

Dedicated DGX resource observations

27 validated native runs | 20 CPUs and 96 GiB per allocation | three repeats per method and size

OrthoHMM high sensitivity OrthoHMM inferred phylogeny OrthoFinder 3.1.5 full

Open symbols: individual repeats. Thick ticks: median. Vertical bars: observed range, not confidence intervals.

All host assessments remain inconclusive. Matched allocations do not establish controlled speed comparisons.

Native elapsed/CPU values are from GNU time. Cgroup peak includes charged cache/kernel memory and may predate launch.

Sampled aggregate RSS is not plotted: process-read gaps differ by method. No speedup ratios or complexity fit are implied.

One nested input series (73,266 / 165,168 / 251,378 proteins); taxon composition and dataset size co-vary.
