

Threadripper shared-host resource observations (partial)

8/27 attempts reviewed | 7 eligible | 1 excluded | 32 native CPUs and 128 GiB per run

● OrthoHMM high sensitivity ■ OrthoHMM inferred phylogeny ▲ OrthoFinder 3.1.5 full × Excluded raw attempt

Symbols: individual reviewed attempts. Gray crosses: excluded raw values, never pooled into eligible summaries.

Median ticks and range bars require three eligible repeats; observed ranges are not confidence intervals.

Unreviewed attempts are absent, not zero. Shared-host contention is unknown and potentially method dependent.

No uncontended timing, causal speedup, fastest-repeat selection, overhead subtraction or historical-time pooling.

CPU: native task-subtree bracket including wrapper. Peak: native-step lifetime including launcher; not pure algorithm RSS.

One nested taxon series: 73,266 / 165,168 / 251,378 proteins; taxon composition and proteome count co-vary.

OrthoHMM high sensitivity | 4 proteomes: 0/3 eligible, 1 excluded; 8 proteomes: 1/3 eligible, 0 excluded; 12 proteomes: 1/3 eligible, 0 excluded

OrthoHMM inferred phylogeny | 4 proteomes: 1/3 eligible, 0 excluded; 8 proteomes: 1/3 eligible, 0 excluded; 12 proteomes: 0/3 eligible, 0 excluded

OrthoFinder 3.1.5 full | 4 proteomes: 1/3 eligible, 0 excluded; 8 proteomes: 1/3 eligible, 0 excluded; 12 proteomes: 1/3 eligible, 0 excluded
