

OrthoBench: sensitivity to supplied species-tree topology

70 reference families | fixed candidates and reconciliation rules | raw gene trees reused

Unchanged supplied control reproduces the inferred baseline. Six prespecified topology perturbations; no best-tree selection.

A Observed scores (%)

Control	74.11	81.77	67.76
NNI 0	74.24	82.29	67.62
NNI 1	74.03	81.79	67.62
NNI 2	74.03	81.60	67.74
2-NNI 0	74.02	82.25	67.28
2-NNI 1	74.27	82.58	67.48
2-NNI 2	73.74	81.99	67.00
	F1	Precision	Recall

Teal: rooted clade distance 2. Ochre: distance 4. Labels retain the frozen variant indices.

Thick: nominal 95% CI. Thin: Bonferroni CI across all 18 endpoints. 20,000 paired RefOG draws; seed 20260918.

Development-exposed topology stress test, not posterior uncertainty, independent validation, or a species-tree selection procedure.
