

Corrected simulations: Fixed-length stress panel

OrthoHMM high sensitivity OrthoHMM satellite_v2

A Admitted datasets (out of 10)

B Paired F1 difference versus full OrthoFinder

Thick lines: nominal 95% CI. Thin lines: Bonferroni-14 CI. Bootstrap unit: independent simulation seed.

Comparisons condition on joint success; failed runs receive no imputed score. Panels are not pooled.

Ten seeds limit interval precision. The sequence checkpoint requires a valid full parent run.
