

OrthoBench: all-method descriptive strata

Eight retained methods | 14 frozen bins | 70 reference families | fixed method order

Development-exposed descriptive results; no new confidence intervals or significance tests. Empty bins are NA, not zero.

Statistics recomputed from family-size-weighted TP/FP/FN, not mean family F1. Bins overlap across dimensions; n counts reference families.

OH = OrthoHMM; OF = OrthoFinder 3.1.5. Descriptors are not validated domain, fragmentation or duplication-history annotations.
