

Threadripper shared-host resource observations

27/27 attempts reviewed | 25 with measured resources | 24 eligible | 2 pre-native aborts

32 native CPUs and 128 GiB per run; shared host, not isolated timing

OrthoHMM high sensitivity OrthoHMM inferred phylogeny OrthoFinder 3.1.5 full × Excluded measured attempt

Symbols: measured attempts. Gray crosses: excluded measurements, never pooled into eligible summaries.

Pre-native aborts have unavailable endpoints and no plotted symbol; they are not zero or unattempted runs.

Median ticks/range bars require three eligible repeats; ranges are not confidence intervals.

Contention distortion is unknown and potentially method dependent. No causal speedup or overhead subtraction.

CPU: task-subtree bracket including wrapper. Peak: native-step lifetime including launcher, not algorithm RSS.

One nested taxon series: 73,266 / 165,168 / 251,378 proteins; taxon composition and proteome count co-vary.

OrthoHMM high sensitivity | 4 proteomes: 2/3 eligible, 1 excluded; 8 proteomes: 3/3 eligible, 0 excluded; 12 proteomes: 3/3 eligible, 0 excluded

OrthoHMM inferred phylogeny | 4 proteomes: 2/3 eligible, 1 excluded; 8 proteomes: 3/3 eligible, 0 excluded; 12 proteomes: 3/3 eligible, 0 excluded

OrthoFinder 3.1.5 full | 4 proteomes: 3/3 eligible, 0 excluded; 8 proteomes: 3/3 eligible, 0 excluded; 12 proteomes: 2/3 eligible, 1 excluded
