

Synthetic null-score tails

Frozen recurrence and significance formula; no parameter fitting

● Full matrix ■ Width 64 - - - Poisson-model reference ▼ Zero-hit upper bound

10,000 independent pairs per panel; whiskers: exact intervals adjusted over 90 planned endpoints.

Forced scoring only, with one target per query. No prefilter, grouping or orthology inference.

Zero-hit triangles mark interval upper bounds, not positive observed fractions; band glyphs are offset slightly.
