

OrthoBench: stratified accuracy tradeoffs

OrthoHMM minus full OrthoFinder 3.1.5 | all 14 prespecified strata | 70 reference families

● OrthoHMM sensitive ■ OrthoHMM phylogenetic

Thick: nominal 95% CI. Thin: Bonferroni CI over all 84 planned endpoints. Open points: n<5, descriptive only.

20,000 paired RefOG draws; seed 20260918. Adjusted tails contain about six draws each; intervals are approximate.

Exploratory, development-exposed analysis. Strata overlap; descriptors do not establish duplication, fragment or domain mechanisms.

Full-reference scoring retained. Empty strata are not zero. Adjusted F1 intervals excluding zero: 0/22.
