

Frozen YGOB validation: curated group recovery

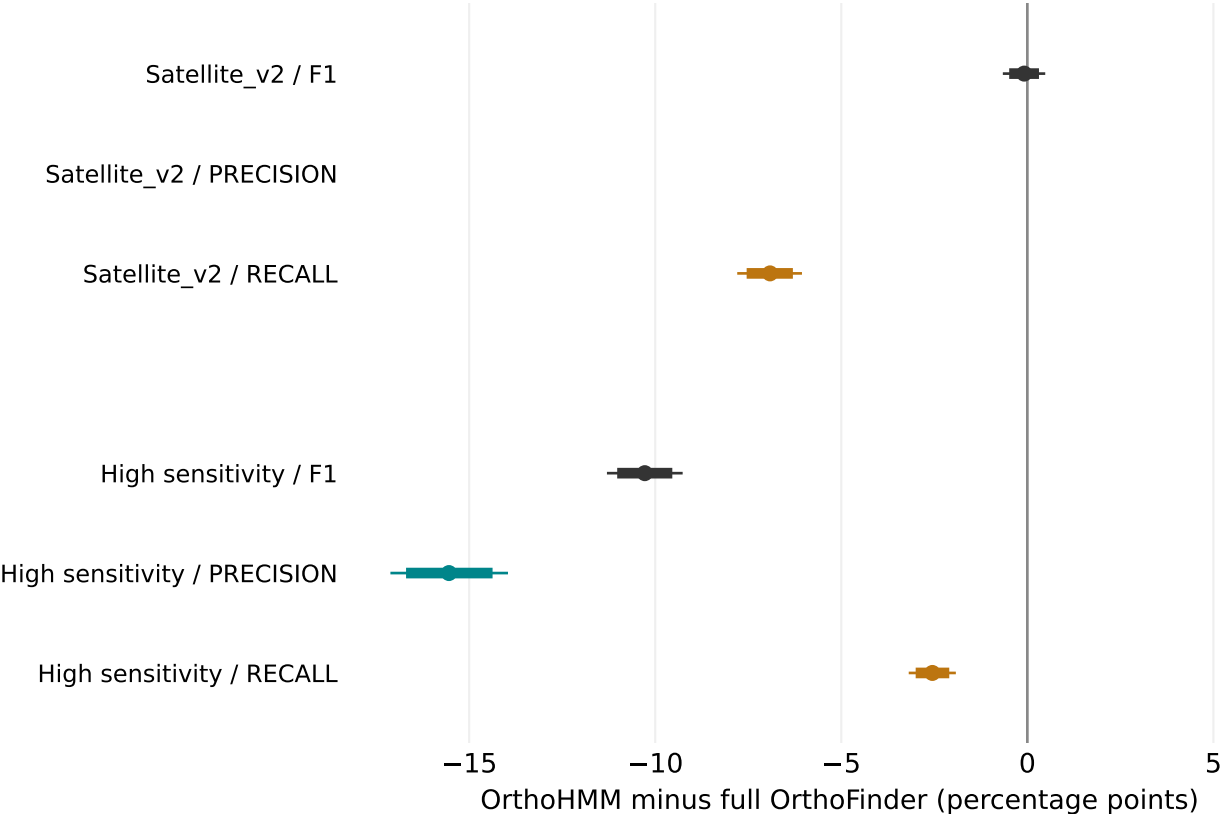

16 species | 83,391 reference genes | 10,250 pillars | all methods: 100% reference-gene coverage

F1 Precision Recall

A Observed scores

B Paired differences

Thick: nominal 95% CI. Thin: Bonferroni CI across six endpoints. 20,000 paired pillar bootstrap replicates.

Satellite_v2 F1 interval includes zero: neither superiority nor formal equivalence is established.

Novel-taxon transfer, not family-disjoint validation. Co-membership includes within-species pairs; not resolved pairwise orthology.
