

OrthoBench: seven methods minus full OrthoFinder 3.1.5

70 RefOGs; 100,000 paired draws. Thick: nominal 95% interval. Thin: 21-endpoint adjusted interval.

Development-exposed, conditional on family exchangeability. Intervals are approximate; inclusion of zero does not establish equivalence.
Sequence-only OrthoFinder is a pre-phylogeny diagnostic. Fixed method order; no new inference, resampling or significance tests.
